# COMMON VEGETABLES ELEPHANT FOOT YAMS

## ELEPHANT FOOT YAMS

Sourced from tropical regions of India, Suran Root / Elephant foot yam is the edible bulb or corm of a very unique looking single-stalked, flowering plant. When harvested, Suran can measure roughly 30 centimeters wide and 20 centimeters tall. Uncultivated Suran may have smaller cormlets attached and may have rootlets growing from its rough surface. The dark brown, almost black skin of the Elephant yam is bark-like but thin enough to be peeled. Its beige colored flesh has a texture like that of a sweet potato, crisp and firm. Suran has an earthy flavor that can also be nutty with a minimal amount of sweetness. Although it is available year-round, its peak season is in late fall.

# COMMON VEGETABLES PUMPKIN

## PUMPKIN

Sourced from across India, Pumpkin is a cultivar of winter squash that is round with smooth, slightly ribbed skin. Pumpkin is mostly deep yellow to the extent of being orange and sports a rough peel. It is considered a fruit and a vegetable simultaneously depending upon the point of view. While it is a product of seed bearing flowering parent, It is consumed as a vegetable owing to its less sweet and more savory taste from a culinary perspective. Rich in vitamins, minerals and antioxidants, pumpkin is incredibly healthy. What's more, it's low calorie content makes it a weight loss friendly food. It's nutrients and antioxidants may boost immune system and protects eyesight.
